application voltage characteristics

APPLICATION

Capacitors for power electronics can be used for a wide range of applications, even in case of extreme non-sinusoidal voltages and pulsed currents. They are used in frequency converters/inverters (traction drives, wind and solar power systems). Input/output reactors are also available and manufactured by Gruppo Energia.

Gruppo Energia produces both AC and DC capacitors. Generally AC capacitors are being periodically recharged during operation while DC capacitors are being periodically charged and discharged without recharge.

This phenomenon is particularly dangerous for capacitors since their impedance decreases proportionally to the level of the harmonics with consequent capacitor overload. This significantly shortens their life.

In some situations, resonance effect can occur as a result of amplification of harmonic currents and a very high voltage distortion.

LIFETIME

The capacitor lifetime depends on the Hotspot temperature caused by current and applied voltage. Usually the service life is between 100 000 - 200 000 hours (see below graphic).

The lifetime described in this graph is calculated according to previous experiences and theoretical preconditions.

It is necessary to consider it as a theoretical curve.

Lifetime can vary for different capacitor types and also for individual deliveries.

PERMISSIBLE OVERVOLTAGE:

1,1 x Un	30% / day
1,15 x Un	30 min / day
1,2 x Un	5 min / day
1,3 x Un	1 min / day
1,5 x Un	100 ms / day

ABBREVIATIONS

- | | |
|--------------|----------------------|
| 1,7 = | AC Filter Capacitors |
| 2 = | Input Reactor |
| 3,5 = | Snubber Capacitors |
| 4 = | DC-LINK Capacitor |
| 6 = | Output reactor |

C_N =	Capacitance value rated at 20 °C / 50 Hz.
U_N =	The maximum or peak voltage of any polarity of reversing or non reversing type of wave (note that rated voltage is not rms value).
U_S =	Non repetitive peak (surge) voltage.
U_{rms} =	Max permissible value of sinusoidal AC voltage in continuous operation.
U_r =	The peak to peak alternating component of the unidirectional voltage.
I_{MAX} =	Maximum rms current value of permissible current in continuous operation.
I =	Maximum permitted repetitive current amplitude during continuous operation.
I_s =	Maximum current that may occur non-repetitively and briefly in the event of a fault. Maximum count 1000 times with a duration of not more than 50 ms each.
R_s =	Equivalent resistance representing the sum of Ohmic resistances occurring inside the capacitor.
L_e =	Self inductance representing the sum of all inductive elements which are contained in any capacitor.
Tanδ =	Constant dissipation factor of the dielectric material for all capacitors in their rated frequency.
R_{th} =	Thermal resistance indicates by how many degrees the capacitor temperature at the hotspot rises in relation to the dissipation losses.
θ_{min} =	Lowest permissible ambient temperature at which a capacitor may be used.
θ_{max} =	Highest permissible capacitor temperature during operation, i.e. temperature at the hottest point of the case.
θ_{HOTSPOT} =	Temperature at the hottest spot inside the capacitor.

3FCM 640 Vac to 1400 Vac Three Phase AC-Filter Capacitors

FCM capacitors are especially designed for harmonic filtering in three-phase. They stand out by their high AC voltage load capacity and suitability for high rms and surge currents.

The three capacitor elements can be connected in delta or start configuration following the customer's requests.

Very good self-healing characteristics and the integrated overpressure protection ensure safe operation and controlled disconnection in rare cases in which the capacitor could fail.

TECHNICAL CHARACTERISTICS

Standards:	IEC 61071, IEC 60831
Origin:	100% made in Italy
Number of phase:	3
Voltage range*:	640 Vac to 1400 Vac
Capacitance tolerance*:	$\pm 5\%$
Insulation strength C x R_{IS}:	5000 s
Tanδ:	2×10^{-4}
Filling material:	polyurethane resin, Non-PCB
Can:	aluminium
Mounting position:	terminals pointing upwards
Internal protection:	self-healing and overpressure disconnector
Minimum operating temperature Θ_{min}:	- 40 °C
Maximum operating temperature Θ_{max}:	+ 85 °C
Temperature hotspot Θ_{HOTSPOT}:	≤ 85 °C
Storing temperature:	- 40 ... 85 °C
Service life @ Θ_{HOTSPOT} ≤ 70 °C:	100000 h
Voltage test between terminals Vdc:	2,15 Un for 10 s
Voltage test beween terminals and case Vac:	4800 Vac for 2 s
Fastening and Earting:	through 1 point, screw M8 or M12
Discharge resistor:	available on request

420 Vac 1700 Vac* / 700 Vdc 2800 Vdc* One Phase AC/DC Capacitors for General Use

GCM capacitors are largely used in power electronics applications, as commutation, supporting, smoothing and surge discharge capacitors. They can also be used in AC filters, thanks to their AC voltage load capacity and outstanding suitability for high rms and surge currents. GCM capacitors are filled with liquid resin and have a high specific ratio of capacitance to volume. Very good self-healing characteristics and the integrated overpressure protection ensure safe operation and controlled disconnection, in the rare cases in which the capacitor could fail.

TECHNICAL CHARACTERISTICS

Standards:	IEC 61071, IEC 60831
Origin:	100% made in Italy
Number of phase:	1
Voltage range*:	420 Vac 1700 Vac / 700 Vdc 2800 Vdc*
Capacitance tolerance*:	±10%
Insulation strength C x R_{IS}:	5000 s
Tanδ:	2 x 10 ⁻⁴
Filling material:	polyurethane resin, Non-PCB
Can:	aluminium
Mounting position:	terminals pointing upwards
Internal protection:	self-healing and overpressure disconnector
Minimum operating temperature Θ_{min}:	- 40 °C
Maximum operating temperature Θ_{max}:	+ 85 °C
Temperature hotspot Θ_{HOTSPOT}:	≤ 85 °C
Storing temperature:	- 40 ... 85 °C
Service life @ Θ_{HOTSPOT} ≤ 70 °C:	100000 h
Voltage test between terminals Vdc:	2,15 Un for 10 s
Voltage test between terminals and case Vac:	4800 Vac for 2 s
Fastening and Earthing:	through 1 point, screw M8 or M12
Discharge resistor:	available on request

* Other values available on request.

450 Vdc 900 Vdc

DC-LINK capacitors for Automotive sector (EV & HEV)

DCAM capacitors are designed for AC/DC power converters application especially for electric and hybrid vehicles. They are featured by high capacitance, small volume, withstands high ripple current, thermostability and high pressure resistance.

All these features make these capacitors perfect for the automotive sector. Their very good self-healing characteristics special profile and wave cut metallized film ensure low self-inductance and high reliability.

TECHNICAL CHARACTERISTICS

Standards:	IEC 61071, IEC 61881
Origin:	100% made in Italy
Voltage range*:	450 Vdc to 900 Vdc
Capacitance tolerance*:	±10%
Dielectric:	special metallized PP film
Tanδ:	2×10^{-4}
Filling material:	dry, filling with epoxy self-extinguishing resin UL-94 V0 , non-inductive, Non-PCB
Case:	plastic
Mounting position:	any
Internal protection:	self-healing
Minimum operating temperature Θ_{min}:	- 40 °C
Maximum operating temperature Θ_{max}:	+105 °C
Temperature hotspot $\Theta_{HOTSPOT}$:	≤ 105 °C
Storing temperature:	- 40... 85 °C
Operating humidity:	≤ 95%
Altitude:	≤ 3000 m
Service life @ $\Theta_{HOTSPOT} \leq 85$ °C:	50000 h at Un
Voltage test between terminals Vdc:	1,5 Un (DC) for 10 s
Voltage test beween terminals and case:	3000 Vac for 10 s at 50/60 Hz
Failure rate:	< 100 FIT

600 Vdc 5000 Vdc Rectangular High Voltage DC-LINK capacitors

DCHM capacitors are especially designed for AC/DC application. They are featured by high voltage and high capacitance and, for this reason, are perfect for traction drivers, wind power converters and solar inverters. Their very good self-healing characteristics and specially profile and wave cut metallized film ensures low self-inductance high rupture resistance and high reliability.

TECHNICAL CHARACTERISTICS

Standards:	IEC 61071, IEC 61881
Origin:	100% made in Italy
Number of terminals:	from 2 to 10
Voltage range*:	600 Vdc to 5000 Vdc
Capacitance tolerance*:	±10%
Dielectric:	Special metallized PP film
Tanδ:	2×10^{-4}
Insulation resistor (RC):	$\geq 20,000$ s. (Un 25 °C)
Filling material:	Dry, filling with epoxy self-extinguishing resin UL-94 V0 , Non-PCB
Case:	304 stainless rectangular steel case
Mounting position:	terminals pointing upwards recommended
Internal protection:	self-healing and overpressure switch (on request)
Minimum operating temperature Θ_{min}:	- 40 °C
Maximum operating temperature Θ_{max}:	+ 85 °C
Temperature hotspot $\Theta_{HOTSPOT}$:	≤ 85 °C
Storing temperature:	- 40 ... 85 °C
Altitude:	≤ 2000 m
Service life @ $\Theta_{HOTSPOT} \leq 70$ °C:	100000 h
Voltage test between terminals Vdc:	1,5 Un (DC) for 10 s
Voltage test beween terminals and case:	$2 \times U_I + 1000$ Vac for 10 s
Fastening and Earting:	through 1 point
Discharge resistor:	available on request

* Other values available on request.

Medium & high frequency water-cooled / air-cooled capacitors are specially designed for use in inductive heating & melting plants for power factor improvement as also for tuning of the circuits for varying inductive loads. These capacitors are manufactured against order to meet the specific and exacting requirements of each customer. For the given application, the performance of these capacitors, demand extreme levels of Reliability, Safety and Life expectancy.

We supply Capacitors required as replacements in induction furnaces, with every effort to closely match dimensions of the failed units.

Please contact us with a sketch of the failed capacitor, showing critical parameters such as terminal arrangements and case dimensions.

TECHNICAL CHARACTERISTICS

Standards:	IEC 60110
Origin:	100% made in Italy
Voltage:	up to 4000 Vac
Power output:	up to 8400 kVar
Frequency:	from 50 to 20000 Hz
Rated current:	not exceeding 4000 A
Dielectric:	electrical grade hazy BOPP film
Electrode:	aluminum foil
Filling material:	non-PCB, biodegradable, non-toxic electrical grade insulating oil
Phase:	single phase
Terminals:	all terminals water cooled or 2 water cooled terminals + taps
Temperature category:	up to 50 °C
Overload limits:	1,05 x Un for maximum 12 hours / day, 1,15 x In
Terminal insulators:	electrical grade molded bakelite
Terminations:	extruded brass, with non-magnetic connection hardware
Cooling:	water cooled by de-mineralized water minimum 5 L/min
Cooling tubes:	electrolytic grade copper tube
Mounting: up wards	horizontal with terminals side wards or vertical with terminals up wards
Casing:	aluminium or brass
Case design:	isolated (dead) or live case
Protection:	thermal and over pressure cut-off (optional)
Voltage test between terminals:	2 x Un AC fpr 10 s. or 4 x Un DC for 10 s.
Voltage test between terminals and casing:	2,15 x Un AC for 10 s., minimum voltage 2 kV

CAPACITORS CONFIGURATION.

High Energy Storage Capacitors are able to store extremely high energy in limited space without sacrificing reliability, quality and degree of accuracy of on board supply. Inside the capacitor we find special winding with minimum inductance and parallel bus bar connection system is used for external connection. Considering the high discharge current duty the inter element connections are designed to withstand the electromagnetic forces developed. These capacitors are charged at a relatively slow rate from few milliseconds to a couple of seconds and discharged at very fast rate. Therefore, very high power outputs are obtained. The percentage of reversal voltage becomes an important parameter in design of capacitor and his cost.

Main features of HESC capacitors are:

- **High Energy Density**
- **Very Low Inductance**
- **High Peak Discharge Current**
- **High Pulse Repetition Rate**
- **Life With High Reliability**

TECHNICAL CHARACTERISTICS

Standards:	IEC 61071
Origin:	100% made in Italy
Voltage range:	from 1,5 kV to 35 kV
Energy range:	from 1 kJ to 12,5 kJ
Capacitance range:	from 10 µF to 250 µF
Inductance:	less than 30 nH
Peak current:	up to 375 kA
Max overload current:	1,1 ratyed peak discharge current
Operating temperature:	from -40 to 55 °C
Storage temperature:	from -40 to 55 °C
Life expectancy:	10 5 shorts (other on request)
Operation:	capacitors are designed to operate at value of voltage reversals are 20% to 80%.
Filling material:	non-PCB, biodegradable, non-toxic special fluid
Winding material:	special PP metallized film or impregnated all film
Terminals:	discharge current up to 400 kA

DISCHARGE WAVEFORM OF 1µF, 100 KV DC CAPACITORS.
